

Zippershield

Zippershield 4780

Flexible EMI shielding for bundles of cables or for cables with big connectors. We can make a shield for any diameter of the bundle.

The standard for a bundle of cables is around 30 mm.

The EMI shield has an open structure so it is easy to see which cable is in the bundle and it also provides good cooling.

We also have systems based on foils where cables are just invisible. We can make any length and also accessories so that branches can be made of the cable. The zipper is of the heavy duty range and the shield overlap should be at least 50% to prevent any leakage.

Part number	Diameter (mm)	Length (mm)
4780	Please specify the desired diameter in mm.	Please specify the desired length in mm.

* Note: The **red** blocks are required
